Languages	FrameWorks	Libraries	Tools
HTML, CSS, Javascript	Bootstrap, Tailwind Css	React,Redux	Git, GitHub, Postman

## PROJECTS

### CONTENT HUB REACT.JS, 🐛

Content Hub is a modern video streaming platform inspired by YouTube,It offers an elegant, responsive UI with features like video browsing, live search, and category filtering,Users will receive personalized video suggestions based on their input value, allowing them to discover content that matches their preferences.

- Users can quickly find videos by entering keywords in the search bar.The application uses Axios to fetch relevant data from the API, filtering the video list based on the input for state management introduced Context Api.
- Created categorizes videos into sections such as games,music and more.When users select a category, the platform uses the YouTube API's category code to fetch relevant videos,results are displayed without page reloads
- Application provides a flexible, responsive interface that adapts across various devices.Regardless of the screen size, users experience smooth navigation. The app uses React Router Dom's **Link** and **params** for efficient routing, allowing users to navigate between categories and video details
- Implemented Detoxify feature allows users to receive video recommendations based on the input value they provide in the search bar,helping them focus on relevant content without distractions and upon clicking a recommended video, it instantly starts playing.
- Improved smooth transitions, responsive Bootstrap Cards, and custom CSS styling, creates an intuitive browsing experience.Interactive hovering effect on images and text more engaging and responsive.

### RECIPE APP DEVELOPMENT Using Html, CSS, JS ,React.JS 🐛

- Developed a recipe platform offering users an easy way to find and explore recipes.With features like search, pagination, and dynamic recipe views, the app provides a seamless and engaging user experience.
- Implemented Axios,Users can quickly search for recipes by entering keywords,making it easy to find specific meal by integrated Api and created pagination controls to let users move through pages easily.
- Users can know the keen details of food recipes implemented by utilizing useParams from React Router Dom by extracting ID from URL, ensuring correct recipe details are shown.
- The use of Bootstrap components and Interactive UI like hover effects creates an intuitive and engaging environment for users.
